

1. Live Tracking - Socket Connection

The goal is to connect via socket and retrieve vehicle details every 5 seconds and populate it on the map.

2. Company Location - Socket Connection

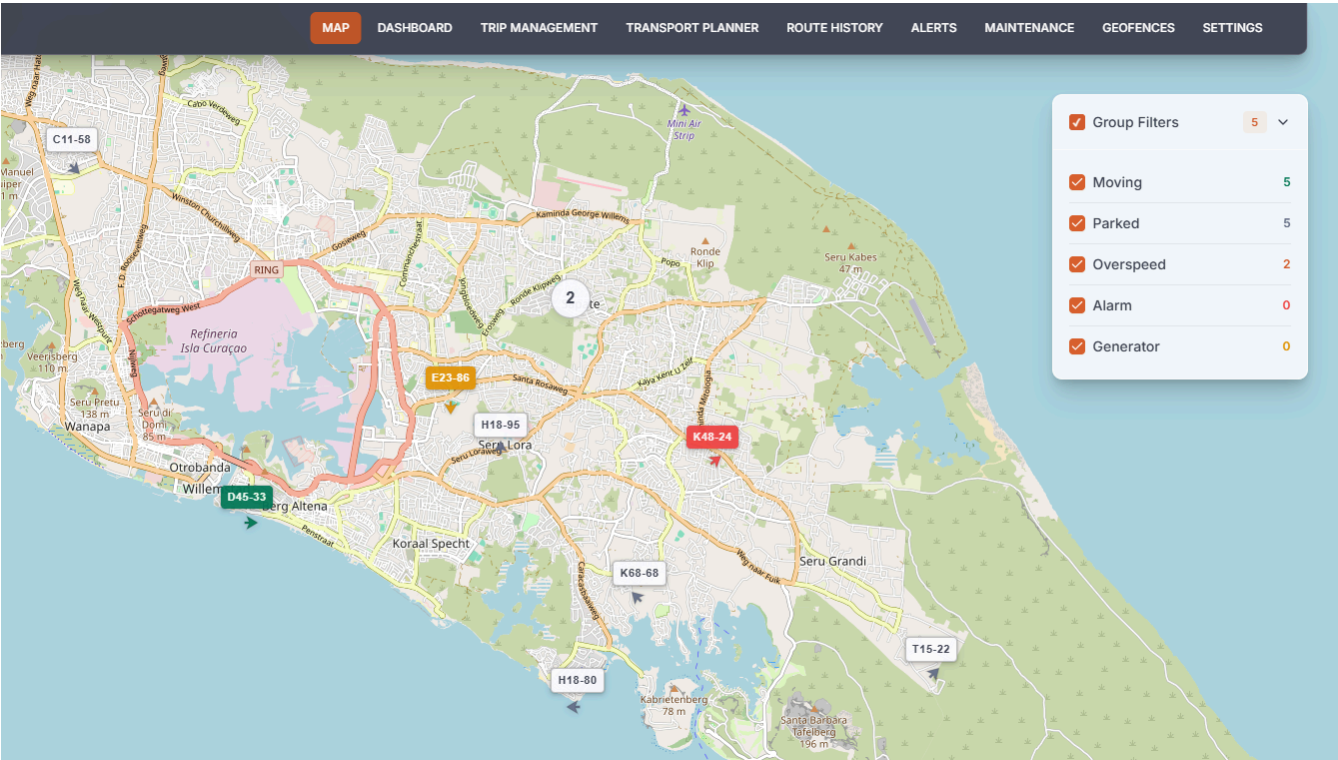

This will allow the user to see how many vehicles are on company locations with Engine On or OFF and specifically on which terrain.

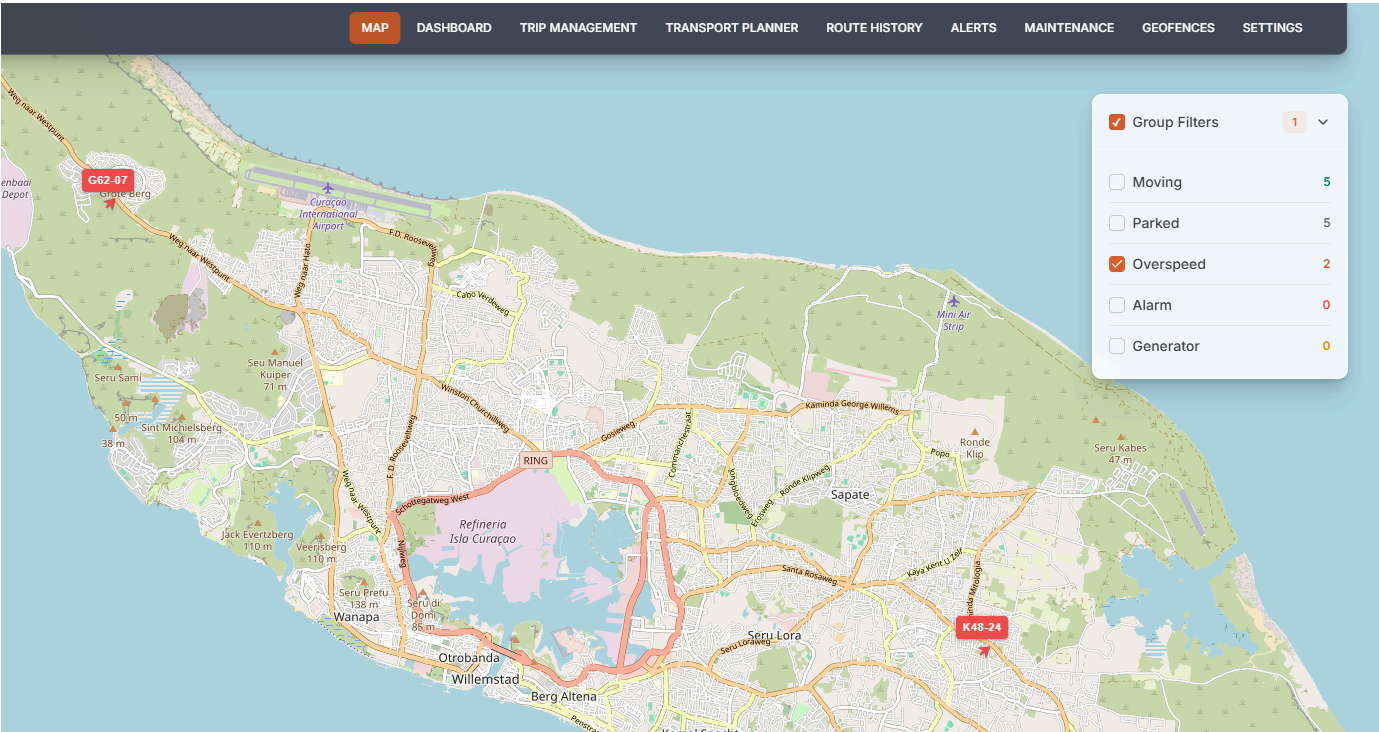

3. Group Filter - Per Request

This will allow the user to remove certain groups of vehicle markers or any other object from the map for better visibility when there are to many marks on the map.

All markers are selected and visible

Only Overspeed markers are visible.

Important Note:

Groups are costumized by each user , that data is available via api.
